

RISE UP SCHOLARSHIP TRAINING PROGRAM

Wisconsin Green Muslims is partnering with the Midwest Renewable Energy Association (MREA) to offer full tuition scholarships for solar training through the Rise Up Scholarship Training Program! Established to expand access to workforce development opportunities in the renewable energy field, Rise Up Scholarships provide recipients with free, industry-leading solar technical training.

Through this program, scholarship recipients will participate in two phases of courses designed to take them from introductory basics to advanced, hands-on solar training. With no prerequisites or previous experience required, the Rise Up Scholarship Training Program provides recipients a springboard into the renewable energy field, qualifying graduates to design, sell, install, and maintain solar systems in a supervised capacity.

To learn more about the Rise Up Scholarship Training Program and view the application instructions, please visit: MIDWESTRENEW.ORG/RISEUPSCHOLARSHIP

Phase One Courses: *Getting Familiar with the Basics*

The specific course offerings in your area may vary and will be determined by Wisconsin Green Muslims. More information will be provided to applicants once they are selected for the program. Potential phase one courses may include:

WORKING WITH ELECTRICITY

(G108) This 8-hour in-person course provides participants with fundamental terms and concepts to better understand how electrical circuits work. It also teaches participants how to stay safe when working with or near electricity.

BASIC PV (PV 101)

This 8-hour in-person course addresses the basics of solar electricity. Participants will learn how PV systems work, compare and contrast different PV system types, identify necessary system components, and understand the best applications for each system type.

PV SITE ASSESSMENT (PV 201)

This 8-hour in-person course uses presentations, exercises, activities, and class discussion to demonstrate how to perform a residential PV site assessment, using a template created by the MREA.

Phase Two Courses: *Preparing to Launch Your Solar Career*

Once recipients complete the course progression above, they can begin taking our phase two offerings. All students who successfully complete PV 101, 201, and 202 will qualify to sit for the NABCEP PV Associate Exam, an increasingly sought-after solar credential valued by the industry. Phase two courses that may be offered include:

PV SYSTEM DESIGN (PV 202)

This 16-hour in-person course teaches the step-by-step process of designing a PV system. Once students complete this course, they qualify to sit for the NABCEP PV Associate Exam.

PV EXAM PREP (PV 220)

This 4-hour in-person course has been created for those ready to take the NABCEP PV Associate Exam. We'll discuss test-taking strategies, review the logistics of the exam, and use practice questions to prepare you for test day.

PV LABS AND DESIGN SCENARIOS

(PV 304) This 8-hour in-person course is designed to demonstrate PV system design principles through the construction of two portable lab systems. This course is only offered in a hands-on, in-person training format.

The MREA promotes renewable energy, energy efficiency, and sustainable living through education and demonstration.

Wisconsin Green Muslims works to connect faith, environmental justice, sustainability, and healing through education and service.
